

ReadMe Document

This ReadMe document will help you with a quick navigation through the contents of the upcoming session.

Outcomes

After completion of this week's sessions, & activity participants will be able to :

1. Understand Hugging Face Transformer Library
2. Understand & fine tune Encoder only architecture i.e. BERT for classification task
3. Understand the concept of Attention and Transformers, which are the foundation for all recent Language models like BERT, GPT, T5 and so on.

Lecture Topics

1. Introduction to Hugging Face Transformer Library
2. Attention and Transformers

Reference Material

The reference material covers :1.**Self Attention**, and 2.**Transformer Architecture**. It's highly recommended to read these materials after attending the lecture. Understanding these concepts is crucial for grasping Transformer Architecture, which forms the basis for recent language models such as BERT, GPT, T5, and others. These reference materials will go deeper into the topic. It will help you to excel in the quiz.

Lecture Notebooks

1. Hugging Face Transformer Library- Tokenizer, Model, Dataset, Pipeline ; Fine tuning of BERT
2. Decoder only Architecture

Individual Labs

1. HF Model training (Fine tuning Tfr) with HF dataset and Custom dataset
2. Performing Classification with Encoder architecture
