

ReadMe Document

This ReadMe document will help you with a quick navigation through the contents of the Pre-Reading material, Preview videos, and Individual Labs for the upcoming session.

Outcomes

After completion of this week's sessions, & activity, participants will be able to :

1. understand & implement few Tensorflow - Keras details & data class
2. understand different properties of a Time Series Data
3. understand and implement different approaches for modeling Time Series Data

Lecture Topics

1. Tensorflow - Keras
2. Time Series & Modeling

Preview Videos

The Preview Videos Link for the respective sessions are available to help you understand the concepts that will be covered in the upcoming lectures. There could be one or more videos depending on the lecture details. The video/videos should be viewed before attending the lecture for better understanding.

There are preview videos for this session, and they should be viewed as given below:

1. Time Series: This is a 12-minute video. A Time Series is a sequence of observations often ordered in time and used for predicting future samples. This video helps you to understand how to predict stock prices using Time Series.
2. Time Series Modeling: This is a 2-minute 29-second video. This video explains about different Time Series Models

Individual Labs

1. Keras, Time Series & Modeling
-
