

ReadMe Document

This ReadMe document will help you with a quick navigation through the contents of the Pre-Reading material, Preview videos, and Individual Labs for the upcoming session.

Outcomes

After completion of this week's sessions, & activity participants will be able to :

1. Understand the theory and intuition behind the working of Recommendation systems.
2. Understand different CNN architectures and the application of convolution layers in text and speech problems.
3. Understand the basics of Recurrent Neural Networks along with their different use cases & architecture.

Lecture Topics

1. Recommendation Systems
2. CNN Architecture and CNN for all
3. RNN

Preview Videos

The Preview Videos Link for the respective sessions are available a week in advance (i.e. every Monday), to help you understand the concepts that will be covered in the upcoming lectures. There could be one or more videos depending on the lecture details. The video/videos should be viewed before attending the lecture for better understanding.

There are two preview videos for this session and they should be viewed as given below:

1. Recommendation Systems: This is a 7-minute video. From this video, you will learn about the Recommendation System and Types of recommendation systems. The recommendation system makes a prediction based on user response. Types of recommendation systems are. 1. User-based CF Algorithm 2. Item-Based Nearest Neighbor Algorithms 3. Hybrid Recommendation Methods
 2. RNN 1: This is a 3-minute video. From this video, you will understand. 1. Word prediction eg. prediction based on the given context. 2. N-Grams, Unigrams and Bigrams.
 3. RNN 2 : This is a 7-minute video. This video helps you to understand how the Recurrent Neural Network works. A Recurrent Neural Network (RNN) is a recursive network which is used primarily to handle sequential data.

ReadMe Document

Pre Reading Material

The pre-reading material is given on (1) RNN. You should read the material before you attend the lecture. This pre-reading will provide the gist of the lecture and facilitate your understanding during the lecture.

Reference Material

The Reference Material is given on (1) RNN. You should read the material after attending the lecture. This reference material will provide further depth into the topic.

Individual Labs

1. Recommendation Systems
2. Time Series Modeling
3. CNN, RNN
